Don't Let the Internet Pass You By

Successful companies in the New Millennium must have an Internet presence on the World Wide Web. Not only is the Internet a source of new customers, perhaps from across the country and around the world, but an attractive and informative web page adds a new level of prestige to your company and its image. That is because today's online customers understand that successful companies rely on the Internet to enhance the quality of service they already provide.

But creating a successful web presence can seem daunting, especially if you need to spend more time handling your already busy day rather than sitting in front of a computer trying to learn new and complicated technology. Hiring experienced staff to create a web page for you can also be costly, since you need such services for only a short while.

Building a Successful Web Presence

Prestige Services is dedicated to helping you make your entry onto the World Wide Web easy and satisfying. Our experienced staff will use their design, layout, and technical skills to create the web presence you desire, one that represents the image of the company you have already established. Then we will help you fully implement your new web site by registering your new domain name and finding an Internet Service Provider to host your site. Finally, we will register your new site for FREE with 20 of the major search engines, so people can find you on the Internet. If you require an eCommerce package to do online selling, we can help you with that, too.

*You Can't Play Today's Game
with Yesterday's Rules.*

Building Successful Internet and eCommerce Solutions

A Web Site of Your Own

Prestige Services uses Microsoft FrontPage 2000 software to create your site. We take advantage of the Corporate Presence Wizard provided with this software to quickly design a web site to your specifications. Your new page will consist of a home page, a contents page, two pages for products, as you specify, and optional pages for news releases and other company information. We can add or remove pages as necessary and according to your requirements. Prestige Services will work with you to pick a color scheme and layout from the templates provided with MS FrontPage, or recreate the general look and feel you already have for your company.

Let's Get Started

To begin, you will need to provide us with all text, graphics and photos to be used on the site. From this information, we will be able to design the projected site navigation and layout. A copy of your marketing brochure, if you have one, is a good place to start, or any other sales and marketing materials you may have.

The cost of creating a web site is \$250 for the first page, assuming that it will take no more than eight hours to create. Additional pages cost \$100 each, for each page taking less than four hours of work to create. The time needed to design a page depends on the complexity of the layout and design, including the number of photos and graphics needed, and the amount of text required. Our rate for work on any one page taking over four hours of work is \$40 per hour. This rate is averaged across the total number of pages in the entire project.

We can help you register a new domain name and then load the pages to that domain. The rate for registering a new domain name with Network Solutions is \$70, plus our fee of \$20 to perform this service for you.

Implementing Your New Site

We can work with an Internet Service Provider of your choice to host your new site, or help you find one if necessary. Prestige Services currently has a working relationship with ProHosting in Salt Lake City, and we highly recommend their services, both for cost and reliability. You may review their services, which are very reasonable, on their web page at www.prohosting.com. Prestige Services can also provide additional services, such as finding related sites for your site to link to. We will provide free registration of your new site with 20 major search engines as part of the initial implementation.

If you already have an established domain name address and an Internet Service Provider, we can load your new web site with your permission. Or we will be glad to provide the entire site to you on either a floppy disk or a Zip disk, depending on the size of the final web site. You can then have your technical staff upload the pages we designed to your domain.
